Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

CLAIMS

Summary

Claim 1 is the independent claim under consideration in this Office Action.

Claims 2-13 are the dependent claims under consideration in this Office Action.

Claim Rejections - 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5 are rejected under 35 U.S.C. § 102(b) as being anticipated by Lioa et al. (6,169,852).

Lioa et al. teach a rapid vapor generator for producing steam, which is useful in a steam iron (from column 1, line 18). The generator includes a reservoir or feed water container 8, a steam chamber comprising fins and grooves 20. The steam generator heats water fed to it and converts it to steam which itself acts as a pump since the exiting steam draws water into the system and thus pumps water from the reservoir to the steam chamber. The generator has a cylindrical shape and thus has a greater thickness cross-section than a thickness. The generator includes a bed of siliceous or glass grains, which are kept in place by stainless steel, mesh portions.

ALLOWABLE SUBJECT MATTER

Claims 4 and 6-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

PERTINENT CITATIONS

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Valiyambath Krishnan and Debourg et al. illustrate steam irons including pumps for pumping water from the reservoir to the steam-producing chamber. Daulasim et al. and Biancalani illustrate steam irons including removable cartridges with porous body materials (including adjuvant). Masataka et al. illustrate an electro-osmotic pump.
